

Energy Cost Impacts on Ohio Families, 2015

High household energy costs and below-average family incomes are straining the budgets of Ohio's lower- and middle-income families. Ohio's 2.3 million households with pre-tax annual incomes below \$50,000, representing 51% of Ohio's families, spend an estimated average of 17% of their after-tax income on residential and transportation energy. Energy costs for the 1.4 million Ohio households earning less than \$30,000 before taxes represent 22% of their after-tax family incomes, before accounting for any energy assistance programs. Minorities and senior citizens are among the most vulnerable to energy price increases due to their relatively low household incomes.

Energy Cost Impacts on Ohio Families, 2015

This paper estimates the impact of energy costs on Ohio households in 2015 using energy consumption survey data and energy price data from the U.S. Department of Energy's Energy Information Administration (DOE/EIA).¹ Energy costs are summarized by household income group using the most recent state population and income data from the Bureau of the Census, tax data from the Congressional Budget Office, and Ohio income tax rates.²

Key findings include:

- Some 51% of Ohio's families have pre-tax annual incomes of \$50,000 or less, with an average after-tax income among these households of \$23,178. In other words, more than half of Ohio's families have average take-home incomes of less than \$2,000 per month.
- The median pre-tax household income of Ohio families in 2014 was \$49,308, 8% below the national median household income. Median income is the midpoint of family incomes: one-half of families have incomes below the median, while the other one-half of families have incomes above it.
- The Census Bureau reports that 12% of all families in Ohio live below the federal poverty level, while 20% of all households with children less than 18 years old live in poverty.
- New U.S. EPA regulations will cause Ohio electricity prices to rise substantially. National Economic Research Associates projects that electricity prices for Ohio consumers could be 12% higher, on average, each year under EPA's Power Plan rule than they would be without the rule. NERA also projects that peak year Ohio electricity price increases (the largest increase in any single year) could be as much as 17% due to the Power Plan.
- Energy costs are consuming the after-tax household incomes of Ohio's low- and middle-income families at levels comparable to other necessities such as housing, food, and health care. The 1.4 million Ohio households earning less than \$30,000 devote an estimated average of 22% of their after-tax incomes to energy.
- The median pre-tax income of Ohio's Black households is \$26,747, 50% below the national median income. Ohio households aged 65 or more, 24% of all households, have a median income 32% below the U.S. median. These relatively low median incomes indicate that Ohio's minority and senior households are among those most vulnerable to energy price increases such as rising household utility bills.

Ohio Household Incomes

U.S. Census Bureau data on Ohio household incomes in 2014 (the most recent available) provide the basis for estimating the effects of energy prices on consumer budgets. The table below shows estimated 2014 after-tax incomes for Ohio families in different income brackets. The Congressional Budget Office has calculated effective total federal tax rates, including individual income taxes and payments for Social Security and other social welfare programs. State income taxes are estimated from current Ohio income tax rates.

Ohio households by pre-tax and after-tax income, 2014

Pre-tax annual income:	<\$30K	\$30- <\$50K	<\$50K	≥\$50K	Total/avg.
Households (Mil.)	1.415	0.906	2.321	2.321	4.591
Pct of total households	30.8%	19.7%	50.6%	50.6%	100.0%
Avg pre-tax income	\$16,173	\$39,768	\$25,384	\$108,087	\$66,252
Effec. fed tax rate %	3.4%	10.6%	6.2%	19.5%	12.9%
Est. state tax rate%	1.5%	4.0%	2.5%	5.0%	3.7%
Est. after-tax income	\$15,381	\$33,962	\$23,178	\$81,606	\$55,308

Some 51% of Ohio families had estimated pre-tax incomes below \$50,000 in 2014. After federal and state taxes, these families had average annual incomes of \$23,178, equivalent to an average monthly take-home income of less than \$2,000. In 2014, the median pre-tax household income of Ohio families was \$49,308, 8% below the national median household income of \$53,657.³

The U.S. Census Bureau reports that the real pre-tax incomes of American households have declined across all five income quintiles since 2001, measured in constant 2014 dollars. As shown in the table below, the largest percentage losses of income are in the two lowest income quintiles.

Households in the lowest quintile lost 14% of their real income between 2001 and 2014. The largest losses of purchasing power – nearly \$3,000 – occurred in the second and third income quintiles, representing lower- and middle-income working families. These declining real incomes increase the vulnerability of low- and middle-income households to energy price increases such as rising utility bills.

Average real U.S. household incomes by income quintile, 2001-2014
(In constant 2014\$)

	1Q	2Q	3Q	4Q	5Q
2001	\$13,553	\$34,055	\$57,002	\$88,597	\$195,188
2014	\$11,676	\$31,087	\$54,041	\$87,834	\$194,053
Pct Chg	-14%	-9%	-6%	-1%	-1%
\$ Chg	(\$1,877)	(\$2,968)	(\$2,961)	(\$763)	(\$1,135)

Residential and Transportation Energy Expenses

Ohio households spent an estimated average of \$2,360 for residential energy in 2015. As shown in Chart 1 below, electricity is the dominant residential energy source, accounting for 64% of total Ohio residential energy expenditures for home heating, cooling and appliances. In addition to natural gas, some Ohio homes also use propane and other heating sources such as wood.

Chart 1

Large electricity price increases are expected under EPA's Power Plan for reducing CO2 emissions from existing power plants. A recent analysis by NERA⁴ projects that electricity prices for Ohio consumers could be 12% higher, on average, each year under the Power Plan than they would be without the Power Plan. NERA projects peak year Ohio electricity price increases (the largest increase in any single year) during the

period 2022-33 could be as much as 17%. In addition, both NERA and EPA⁵ estimate that consumers nationwide could be required to spend more than \$300 billion to reduce electricity use over the first 12 years of the program.

Energy Expense Estimates

Estimated household energy expenses for Ohio are based upon DOE/EIA residential electric and natural gas sales data for Ohio through September 2015.⁶ Total household energy costs are distributed by income category using DOE/EIA residential energy survey data.

Gasoline prices have declined substantially in the past two years, but the outlook for future gas pump prices is uncertain due to reductions in domestic drilling investments and tensions in the Middle East. EIA's November 2015 Short-Term Energy Outlook estimates national average gasoline prices of \$2.50 per gallon in 2015.

DOE/EIA's 2001 Survey of Household Vehicles Energy Use (2005) provides data on regional gasoline use by household income category. These regional gasoline consumption data are updated using EIA's 2015 national average retail gasoline price estimate of \$2.50 per gallon. Household gasoline consumption is reduced by 15% from 2001 levels, reflecting trends in per capita retail gasoline sales.⁷

The table below summarizes estimated Ohio household energy expenses in 2015 by income group, with the percentage of after-tax income represented by energy costs:

Estimated Ohio household energy costs by income category, 2015

Pre-Tax Annual Income:	<\$30K	\$30- <\$50K	<\$50K	≥\$50K	Average
Residential energy \$	\$1,835	\$2,096	\$1,937	\$2,760	\$2,360
Electric \$	\$1,172	\$1,372	\$1,250	\$1,745	\$1,504
Natural Gas \$	\$523	\$571	\$542	\$797	\$675
Other* \$	\$140	\$153	\$145	\$219	\$181
Gasoline \$	\$1,622	\$2,451	\$1,946	\$3,321	\$2,663
Total energy \$	\$3,457	\$4,547	\$3,883	\$6,081	\$5,023
Energy % of after-tax income	22%	13%	17%	7%	9%

*Other includes LPG and wood.

The share of household income spent for energy falls disproportionately on lower- and middle-income families earning less than \$50,000 per year before taxes. The 51% of Ohio households earning less than \$50,000 before taxes spent an estimated 17% of their after-tax income on energy. While many lower-income consumers qualify

for energy assistance, budgetary support for these government programs has been reduced in recent years.⁸

Ohio families spent an estimated average of \$5,023 on residential and transportation energy in 2015, or 9% of the after-tax family budget. The 1.4 million Ohio households earning less than \$30,000 before taxes, representing 31% of households, allocated 22% of their after-tax incomes to energy. The large share of after-tax income devoted to energy poses difficult budget choices among food, health care and other basic necessities.

Disproportionate Impacts on Minorities and Senior Citizens

The impacts of high energy costs are falling disproportionately on Ohio’s minorities and elderly residents. Social Security recipients represent 31% of the state’s households. Unlike young working families with the potential to increase incomes by taking on part-time work or increasing overtime, many fixed income seniors are limited to cost-of-living increases that may not keep pace with energy prices.

The table below summarizes Ohio’s 2014 median pre-tax incomes for elderly, Black, and Hispanic households, and compares these with the U.S. median household income of \$53,657.

U.S. and Ohio Median Pre-tax Household Incomes, 2014

	Median Household Income	OH Pct. Diff. vs. U.S. Median	Pct. of OH Households
U.S.	\$53,657		
Ohio	\$49,308	-8%	
OH: Black	\$26,747	-50%	12%
OH: Hispanic	\$38,794	-28%	2%
OH: Age 65+	\$36,574	-32%	24%

Source: U.S. Bureau of the Census, American Community Survey 2014 (2015)

Ohio’s Black households have a median income of \$26,747, 50% below the national median income, respectively. Ohio households aged 65 or more, 24% of all households, have a pre-tax median income 32% below the U.S. median.

These relatively low median incomes indicate that Ohio’s minority and senior households are among those most vulnerable to energy price increases such as rising household utility bills.

Conclusion

High consumer household energy prices - together with negative real income growth among lower- and middle-income households - underscore the need to maintain affordable energy prices, especially for low- and middle-income Ohio families. Maintaining the relative affordability of electricity and other energy prices is essential to the wellbeing of Ohio's lower-income citizens.
