

Energy Cost Impacts on South Carolina Families, 2015

High household energy costs and below-average family incomes are straining the budgets of South Carolina's lower- and middle-income families. South Carolina's 1.0 million households with pre-tax annual incomes below \$50,000, representing 55% of South Carolina's families, spend an estimated average of 19% of their after-tax income on residential and transportation energy. Energy costs for 612,000 South Carolina households earning less than \$30,000 before taxes represent 25% of their after-tax family incomes, before accounting for any energy assistance programs. Minorities and senior citizens are among the most vulnerable to energy price increases due to their relatively low household incomes.

Energy Cost Impacts on South Carolina Families, 2015

This paper estimates the impact of energy costs on South Carolina households in 2015 using energy consumption survey data and energy price data from the U.S. Department of Energy's Energy Information Administration (DOE/EIA).¹ Energy costs are summarized by household income group using the most recent state population and income data from the Bureau of the Census, tax data from the Congressional Budget Office, and South Carolina income tax rates.²

Key findings include:

- Some 55% of South Carolina's families have pre-tax annual incomes of \$50,000 or less, with an average after-tax income among these households of \$22,810. In other words, more than one-half of South Carolina's families have average take-home incomes of \$1,900 per month.
- The median pre-tax household income of South Carolina families in 2014 was \$45,238, 16% below the national median household income. Median income is the midpoint of family incomes: one-half of families have incomes below the median, while the other one-half of families have incomes above it.
- The Census Bureau reports that 13% of all families in South Carolina live below the federal poverty level, while 22% of all households with children less than 18 years old live in poverty.
- New U.S. EPA regulations will cause South Carolina electricity prices to rise substantially. National Economic Research Associates projects that electricity prices for South Carolina consumers could be 9% higher, on average, each year under EPA's Power Plan rule than they would be without the rule. NERA also projects that peak year South Carolina electricity price increases (the largest increase in any single year) could be as much as 11% due to the Power Plan.
- Energy costs are consuming the after-tax household incomes of South Carolina's low- and middle-income families at levels comparable to other necessities such as housing, food, and health care. The 612,000 South Carolina households earning less than \$30,000, one-third of all households, devote an estimated average of 25% of their after-tax incomes to energy.
- The median pre-tax income of South Carolina's Black households is \$30,333, 43% below the national median income. South Carolina households aged 65 or more, 26% of all households, have a median income 32% below the U.S. median. These relatively low median incomes indicate that South Carolina's minority and senior households are among those most vulnerable to energy price increases such as rising household utility bills.

South Carolina Household Incomes

U.S. Census Bureau data on South Carolina household incomes in 2014 (the most recent available) provide the basis for estimating the effects of energy prices on consumer budgets. The table below shows estimated 2014 after-tax incomes for South Carolina families in different income brackets. The Congressional Budget Office has calculated effective total federal tax rates, including individual income taxes and payments for Social Security and other social welfare programs. State income taxes are estimated from current South Carolina income tax rates.

South Carolina households by pre-tax and after-tax income, 2014

Pre-tax annual income:	<\$30K	\$30- <\$50K	<\$50K	≥\$50K	Total/avg.
Households (Mil.)	0.612	0.381	0.993	0.834	1.827
Pct of total households	33.5%	20.9%	54.4%	45.6%	100.0%
Avg pre-tax income	\$16,180	\$39,712	\$25,209	\$105,624	\$61,903
Effec. fed tax rate %	3.5%	10.6%	6.2%	19.5%	12.3%
Est. state tax rate%	2.2%	5.0%	3.3%	6.5%	4.8%
Est. after-tax income	\$15,254	\$33,517	\$22,810	\$78,162	\$51,355

Some 54% of South Carolina families had estimated pre-tax incomes below \$50,000 in 2014. After federal and state taxes, these families had average annual incomes of \$22,810, equivalent to an average monthly take-home income of \$1,900. In 2014, the median pre-tax household income of South Carolina families was \$45,238, 16% below the national median household income of \$53,657.³

The U.S. Census Bureau reports that the real pre-tax incomes of American households have declined across all five income quintiles since 2001, measured in constant 2014 dollars. As shown in the table below, the largest percentage losses of income are in the two lowest income quintiles.

Households in the lowest quintile lost 14% of their real income between 2001 and 2014. The largest losses of purchasing power – nearly \$3,000 – occurred in the second and third income quintiles, representing lower- and middle-income working families. These declining real incomes increase the vulnerability of low- and middle-income households to energy price increases such as rising utility bills.

Average real U.S. household incomes by income quintile, 2001-2014
(In constant 2014\$)

	1Q	2Q	3Q	4Q	5Q
2001	\$13,553	\$34,055	\$57,002	\$88,597	\$195,188
2014	\$11,676	\$31,087	\$54,041	\$87,834	\$194,053
Pct Chg	-14%	-9%	-6%	-1%	-1%
\$ Chg	(\$1,877)	(\$2,968)	(\$2,961)	(\$763)	(\$1,135)

Residential and Transportation Energy Expenses

South Carolina households spent an estimated average of \$2,497 for residential energy in 2015. As shown in Chart 1 below, electricity is the largest residential energy expense, accounting for 88% of total South Carolina residential energy expenditures for home heating, cooling and appliances. In addition to natural gas, some South Carolina homes also use propane and other heating sources such as wood.

Chart 1

Large electricity price increases are expected under EPA's Power Plan for reducing CO2 emissions from existing power plants. A recent analysis by NERA⁴ projects that electricity prices for South Carolina consumers could be 9% higher, on average, each year under the Power Plan than they would be without the Power Plan. NERA projects peak year South Carolina electricity price increases (the largest increase in any single year) during the period 2022-33 could be as much as 11%. In addition, both

NERA and EPA⁵ estimate that consumers nationwide could be required to spend more than \$300 billion to reduce electricity use over the first 12 years of the program.

Energy Expense Estimates

Estimated household energy expenses for South Carolina are based upon DOE/EIA residential electric and natural gas sales data for South Carolina through September 2015.⁶ Total household energy costs are distributed by income category using DOE/EIA residential energy survey data.

Gasoline prices have declined substantially in the past two years, but the outlook for future gas pump prices is uncertain due to reductions in domestic drilling investments and tensions in the Middle East. EIA's November 2015 Short-Term Energy Outlook estimates national average gasoline prices of \$2.50 per gallon in 2015.

DOE/EIA's 2001 Survey of Household Vehicles Energy Use (2005) provides data on regional gasoline use by household income category. These regional gasoline consumption data are updated using EIA's 2015 national average retail gasoline price estimate of \$2.50 per gallon. Household gasoline consumption is reduced by 15% from 2001 levels, reflecting trends in per capita retail gasoline sales.⁷

The table below summarizes estimated South Carolina household energy expenses in 2015 by income group, with the percentage of after-tax income represented by energy costs:

Estimated South Carolina household energy costs by income category, 2015

Pre-Tax Annual Income:	<\$30K	\$30- <\$50K	<\$50K	≥\$50K	Average
Residential energy \$	\$1,946	\$2,258	\$2,066	\$3,051	\$2,497
Electric \$	\$1,717	\$2,009	\$1,829	\$2,686	\$2,202
Natural Gas \$	\$157	\$171	\$162	\$250	\$202
Other* \$	\$72	\$79	\$75	\$114	\$93
Gasoline \$	\$1,865	\$2,720	\$2,193	\$3,693	\$2,878
Total energy \$	\$3,811	\$4,978	\$4,259	\$6,744	\$5,375
	\$0				
Energy % of after-tax income	25%	15%	19%	9%	10%

*Other includes LPG and wood.

The share of household income spent for energy falls disproportionately on lower- and middle-income families earning less than \$50,000 per year before taxes. The 1.0 million South Carolina households earning less than \$50,000 before taxes spent an estimated 19% of their after-tax income on energy. While many lower-income

consumers qualify for energy assistance, budgetary support for these government programs has been reduced in recent years.⁸

South Carolina families spent an estimated average of \$5,375 on residential and transportation energy in 2015, or 10% of the after-tax family budget. The 612,000 South Carolina households earning less than \$30,000 before taxes, 33% of all households, allocated 25% of their after-tax incomes to energy, more than twice the statewide average. The large share of after-tax income devoted to energy poses difficult budget choices among food, health care and other basic necessities.

Disproportionate Impacts on Minorities and Senior Citizens

The impacts of high energy costs are falling disproportionately on South Carolina’s minorities and elderly residents. Social Security recipients represent 40% of the state’s households. Unlike young working families with the potential to increase incomes by taking on part-time work or increasing overtime, many fixed income seniors are limited to cost-of-living increases that may not keep pace with energy prices.

The table below summarizes South Carolina’s 2014 median pre-tax incomes for elderly, Black, and Hispanic households, and compares these with the U.S. median household income of \$53,657.

U.S. and South Carolina Median Pre-tax Household Incomes, 2014

	Median Household Income	SC Pct. Diff. vs. U.S. Median	Pct. of SC Households
U.S.	\$53,657		
SC	\$45,238	-16%	
SC: Black	\$30,333	-43%	26%
SC: Hispanic	\$35,595	-34%	4%
SC: Age 65+	\$36,694	-32%	26%

Source: U.S. Bureau of the Census, American Community Survey 2014 (2015)

South Carolina’s Black households have a median income of \$30,333, 43% below the national median income. South Carolina households aged 65 or more, 26% of all households, have a pre-tax median income 32% below the U.S. median.

These relatively low median incomes indicate that South Carolina’s minority and senior households are among those most vulnerable to energy price increases such as rising household utility bills.

Conclusion

High consumer household energy prices - together with negative real income growth among lower- and middle-income households - underscore the need to maintain affordable energy prices, especially for low- and middle-income South Carolina families. Maintaining the relative affordability of electricity and other energy prices is essential to the wellbeing of South Carolina's lower-income citizens.
